Each plant is a perfect mound 8 to 10 inches high, reminding one of the Eskimo igloo and is covered with a wealth of bloom throughout the entire summer. 905 A splendid new introduction having large velvety purple-blue flowers 4 inches in diameter with long, beautifully curled and interlaced petals. # PERRY'S SHADY SPOT LAWN SEED

A Lawn Sown with Perry's Shady Spot Lawn Seed

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees receiving sunshine less than half the day

Our Shady Spot Lawn Seed is blended from the best grasses possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. It is always advisable for those who are seeding down shady places to supply new soil, if possible, especially if large trees are producing the shade, as their roots spread so fast as to quickly exhaust its nourishment. Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful.

½ lb. 35c., 1 lb. 65c., 5 lbs. \$3.15, 10 lbs. \$6.00, 25 lbs. (1 bu.) \$13.75, 50 lbs. \$27.50. Ask for prices on larger quantities. Postpaid in New England at above prices when cash accompanies the order, up to and including 20 lbs.

## PERRY'S SEASHORE LAWN GRASS MIXTURE

Many a lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of 4 inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 square feet.

Lb. 60c., 5 lbs. \$2.75, 10 lbs. \$5.25, 25 lbs. \$12.50

## PERRY'S PUTTING GREEN MIXTURE

For an Ideal and Lasting Turf

This is an extra fine lawn grass mixture that will produce at home a turf as fine as on the putting greens of golf clubs. We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 90c., 5 lbs. \$4.40, 10 lbs. \$8.50, 20 lbs. \$16.50, 50 lbs. \$41.00, 100 lbs. \$80.00

## PERRY'S BENT GRASS LAWN MIXTURE

For Those Who Appreciate Quality

We offer this mixture blended from a formula employing fine bladed Bent grasses. Sow seed at the rate of 1 lb. to each 250 square feet. Several times during the season broadcast ½ oz. of sulphate of ammonia mixed with six times its bulk of finely sifted soil to each square yard of surface. Lb. \$1.25, 5 lbs. \$5.75, 10 lbs. \$11.00, 20 lbs. \$21.00, 50 lbs. \$50.00, 100 lbs. \$98.00

## PERRY'S "NEU LON" MIXTURE

# HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June bugs and Japanese Beetles, dig in also 3 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 5-8-7 to each 1000 square feet, especially under trees.

When sowing your seed, be sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water

weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear, dig them out promptly. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Lawn Seed on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. With the lawn clean, fill in all hollows with good top soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done, the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.

## SWEET CORN

Postpaid at pound prices. For larger quantities by Parcel Post, add postage

**Culture**—Plant about May 15th and in succession every two weeks up to July 14th. Drop six kernels to a hill. Three or more rows should be planted, however, either way in order to secure cross fertilization.

### New Hybrid Varieties

The greatest improvement in Sweet Corn in recent years is the development of these hybrids that outyield all others and are also resistant to Stewart's disease. ## FOR THE CONTROL OF THE EUROPEAN CORN BORER

We recommend "Black Leaf" Dual-Fixed Nicotine Dust. Apply at full strength using a hand duster. Dust the growing whorls of the main stalks and each tiller, and each of the developing ears when present. These are the points attacked by the young borers, hence require the protection afforded by the Dust. Timing is important—start as soon as the first eggs hatch, and repeat applications at 5-day intervals for about two weeks, or as long as required. Hatching usually starts by the middle of June.

## SOW WINTER RYE AS A COVER CROP

There are hundreds of gardens that can be benefited by a Fall planting of Winter Rye. Sown at the rate of 5 lbs. to a space 40 by 40, raked in and allowed to grow until April, Winter Rye will produce an abundance of roots and foliage that will not only restore fertility to soils but improve them by adding a lot of desirable humus. It is a logical and sensible thing to do because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been harvested, Fall planting of Rye even as late as November would be a logical procedure.

**Rosen Winter Rye.** Lb. 15c., 5 lbs. 50c., 14 lbs. \$1.00, 56 lbs. \$3.00

## INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form Legume Aid with instructions for use in every package.

## PERRY'S PRIZE ASTERS

**WILT-RESISTANT STRAINS.** Wilt most commonly occurs in the hot Midsummer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use Wilt-resistant Strains that have proven so valuable that wherever available we offer them to the exclusion of others. Plants grown from Wilt-resistant Strains are not immune to the disease known as Aster "yellows," which is quite different and is transmitted by insects. However, they are not so susceptible to infection from it as they have a sturdier constitution. Unless otherwise noted, all our seed is of a Wilt-resistant Strain.

Before planting we suggest mixing 2½ oz. of Semesan in 1 gal. of water and allow the bulbs to soak in this solution for 7 hours.

When the plants have attained a height of 6 in. the U. S. Dept. of Agriculture recommends weekly spraying with the following mixture. ¼ lb. Tartar Emetic, 1 lb. brown sugar, 6 gal. water.

After the bulbs have been lifted in the fall and the tops cut off, put them in boxes and dust with Naphthalene Flakes, using 1 oz. to 100 bulbs. Cover the boxes with paper and leave them for 4 weeks. Do not use boxes with tight fitting covers as ventilation is important.

At the end of 4 weeks remove the Naphthalene Flakes and store the bulbs as usual.

"Delayed Dormant" "Pink" Spray

## APPLES

"Dormant Spray"—primarily to kill Scale. Dilute either Scalecide, the best oil emulsion, 1 part to 15 parts of water; or Lime Sulphur, if dry, 1 lb. to 12½ gals.; if liquid, 1 to 9.

"Delayed Dormant"—when buds begin to break but not after leaves are ½ inch long, for Red Mite and Scale. Use same spray as for Dormant, but add 1 oz. Black Leaf 40 to each 6 gals. of diluted mixture for Aphids.

"Pre-Pink"—before blossoms show pink, for Scab, Bud Moth and Tent Caterpillar. Dilute Liquid Lime Sulphur 1 to 50, or Dry Lime Sulphur 1 lb. to 12½ gals. with 1 lb. Arsenate of Lead to each 30 gals. of diluted mixture. Kayso, or Hydrated Lime (Sanilime) may wisely be added to avoid a danger of burning.

"Calyx"—After 90 per cent of blossoms have fallen. (Never spray while the fruit buds are fully open, for you spoil the set of fruit and may poison bees.) Use same materials

"Calyx" Spray

"Fourth" Spray

as for Pre-pink, but increase Arsenate of Lead to 1 lb. to each 25 gals. of diluted mixture for Codlin Moth, Curculio, Gypsy Moth and Scab.

For Later Sprays—consult your Experiment Station Bulletin.

"Pink"—for Brown Rot when blossoms show pink, use Wettable Sulphur, 1 lb. in 20 gals. of water.

"Shuck"—for Brown Rot and Scab when shucks are splitting. Repeat Pink Spray.

"First Cover"—for Brown Rot, Scab and Curculio a week or ten days after Shuck Spray use Wettable Sulphur, as in previous sprays, adding 1 lb. Arsenate of Lead and 2 lbs. Hydrated Lime (Sanilime) to each 50 gals. of water.

### SOIL-SOAKER

Made of Canvas—Scientifically Treated to Resist Mildew

Soil-Soaker, open only at one end, screws to the end of the water hose, replacing the nozzle or sprinkler. Easily moved without shutting off water or getting wet. The soil is soaked deeply and thoroughly, covering an area on all sides of Soil-Soaker. Far more beneficial than light surface-sprinkling. Puts the moisture down into the soil.

### PLANT STARTER

A self watering cypress seed flat one foot square elevated in such a manner that a pan of water can be placed beneath it. Moisture is conveyed to the flat by means of a fiber glass wick, one end being placed in the water and the other passed through a hole in the bottom of the flat. A steady supply of water passing up through the wick assures an even supply of moisture at all times. The starter has one removable side making it easy to remove seedlings or rooted cuttings when ready to transplant. Prevents overwatering, damping off, drying out, and shock to seedlings from cold water.

Plant starter equipped with fiber glass wick. \$1.25.

### PLANT WICK

The most practical and efficient method of watering. For starting seedlings, rooted cuttings and for potted plants. Plant Wick is made of pure Fiberglass and as it is absolutely inorganic, carries no disease, does not rot in the soil and can be sterilized easily and quickly.

Use 2-6 inch No. 3 wicks to a standard seed flat. Plant Wick comes in 3 sizes, thus enabling you to use it in pots from 2 in. up to 12 in.

### DON'T WASTE GARDEN RUBBISH—CONSERVE IT BY USING ADCO

Garden wastes, including leaves and grass clippings are too valuable to burn or otherwise destroy. Convert them easily into rich, organic manure by employing ADCO, a powder which when mixed with vegetable waste and kept moist gradually converts the material into real manure free from weed seeds. The method of using ADCO is simple. Anybody can use it. Spread your farm and garden rubbish (either in a heap on top of the ground, in a large crate, or in a shallow pit) and every time it becomes 6 inches higher, wet it down, sprinkle with ADCO, and tramp or tamp it down. Repeat these steps until all the rubbish is used, and at least once, at the end of a month, turn it over. In three months or so you will be rewarded with a fine lot of rich, clean, organic fertilizer. 7½ lbs. \$1.00; 25 lbs., sufficient to reduce 10 wheelbarrows of material, \$2.25; 150 lbs. \$10.50.

The plants we offer are grown on stems about 4 feet high and the crowns are about  $2\frac{1}{2}$  to 3 feet in diameter. Every plant has bloomed before it leaves the nursery.

**White Tree Wisteria.** The white-flowered form of the above. Delicate silvery white blooms. Each \$7.00
